

Manas Gangwani

Mumbai, India · manasjg1996@gmail.com · +91-7798295405 · [LinkedIn](#)

Product manager with 7 years of 0→1 experience across AI, ed-tech, and gaming. I've owned product, growth, and technical quality simultaneously. The kind of breadth a founding PM needs when there's no one else to hand off to. Seeking roles based in Mumbai or remote.

CORE COMPETENCIES

Product: 0→1 product development · user research & discovery · roadmap prioritization · monetization & business model design · subscription growth

AI & Technical: Prompt & example engineering · multi-agent pipelines · model evaluation · Claude Code · MCP · WebGL optimization · Unity3D / C#

Growth & GTM: Acquisition funnel design · B2B outbound (AI-assisted) · Google Ads · community-led growth

EXPERIENCE

Senior Manager, Product · upGrad International

May 2026 – Jul 2026

- **Streamlined tech operations;** improved V2L conversion from 0.7% to 1.3% by shipping page performance fixes and low-hanging UI/UX improvements across the website
- **Set up the team's roadmap;** built a Trello board to sequence and track priority fixes for the tech team through the JAS quarter

Entrepreneur in Residence — Product Lead · Outscal

Dec 2021 – Apr 2026

Outscal is an early-stage startup that has operated across two distinct product phases. I have been the sole product owner across both, working directly with the founder.

Phase 2 · Founding PM, AI Video Platform (2025 – Apr 2026)

- **Product:** An AI-powered animated explainer video platform that generates code-based videos from text scripts, built on a Director → Designer → Video Coder multi-agent pipeline using Claude Code and Remotion (React/TSX)
- **Quality ownership:** Own the non-deterministic layer of the pipeline. The part that determines whether AI outputs are actually usable. This means prompt and example engineering, model selection experiments, and iterative debugging of failure modes across each agent
- **Specific problems solved:** Diagnosed a Director agent failure where engineering-heavy context suppressed cinematic output; resolved ElevenLabs voice pipeline compatibility. Integrating different video styles in the project and solving repeating problems like overlapping, etc.
- **GTM:** Built B2B outbound motion from scratch. GPT for prospect research, Claude for personalized copy, Airtable for automation; targeting Series A–C SaaS and edtech companies; 5% reply rates

Phase 1 · Founding PM, Ed-tech Platform (2021 – 2025)

- **Discovery & iteration:** Ran experiments across five distinct models. Free programme, recruitment service, job portal, jobs-to-courses funnel, and subscription.
- **Scaled the job portal** from 0 to 140,000 MAU and a resources hub to 20,000 MAU;
- **Subscription launch:** Designed and shipped the subscription product with the founder; grew free trials from 0 to 40 per day within three months
- **Acquisition:** Ran Google Ads (Search + Demand Gen) to test acquisition economics; personally closed international sales for US and EU market entry
- **Reduced content production time** from approx.. one month to two days by integrating AI into the course creation pipeline. An early signal that led to the Phase 2 pivot

Game Programmer · Xansr Technologies · Temple Run 2

Dec 2020 – Nov 2021

- Delivered the Temple Run 2 WebGL port (100MB to 15MB via Babylon.js, GLTF, custom shaders, dynamic zone streaming) . The game is live on Poki; gave me deep exposure to performance optimization and live ops at scale
- Shipped multiple live mobile features: Pet System, character select screen (50+ characters), Christmas event map, onboarding tutorial

Unity Developer · Karmic Pixel / AcidTrip Arts Studio

Feb 2018 – Dec 2020

- Sole developer on Hoppy Ball (published Android & iOS) and Astral Orbiter (orbital mechanics); showcased Ballistic Ball at IGDC and IGX

EDUCATION

B.E. Computer Engineering · VESIT, Mumbai University

2018 · CGPA 7.9

Full Stack Game Development · Outscal

Jun 2020 – Jan 2021
